Ideation Documentation

Ziyadatan Imad Aqil Mardi – I499768 | Student ID: 4718321

Application

The application will work as a pet adoption center website that will show animals from various shelters to see which animal suits the user most for them to adopt. The focus of the animals will be cats and dogs but other animals will also be considered later if it is possible. The user will be able to filter which traits, breed and other quirks the animal would have.

The user needs an account to leave reviews of the shelter and to adopt the animal. The admin can add the shelters and the animals that are available to be adopted from the shelter.
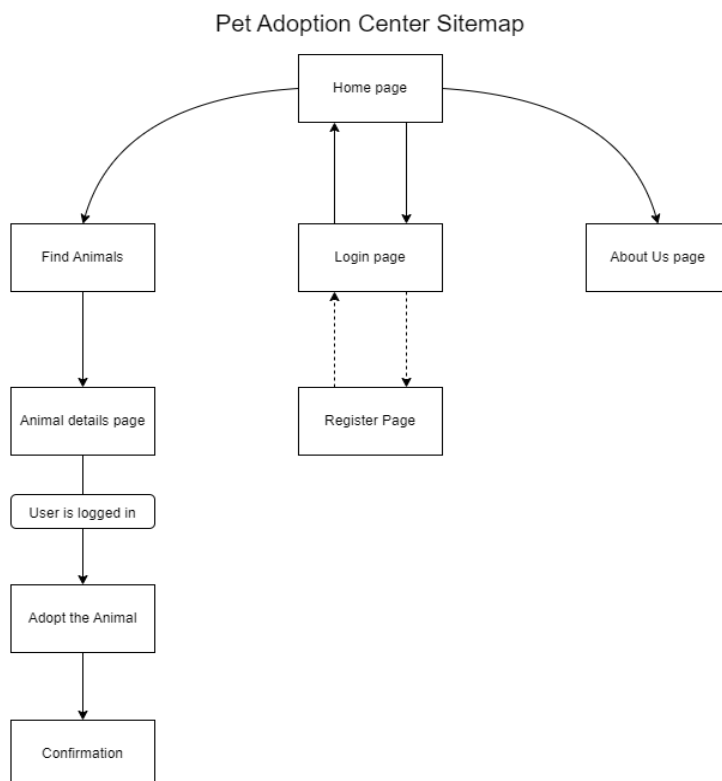

Features

User features:

- User can access every shelters to see all the animals the shelter has to offer
- User needs to create an account in order to leave review and adopt a pet
- User can search for animals with specific traits i.e. Species, affectionate level, etc
- User can filter which shelter they wanted to see
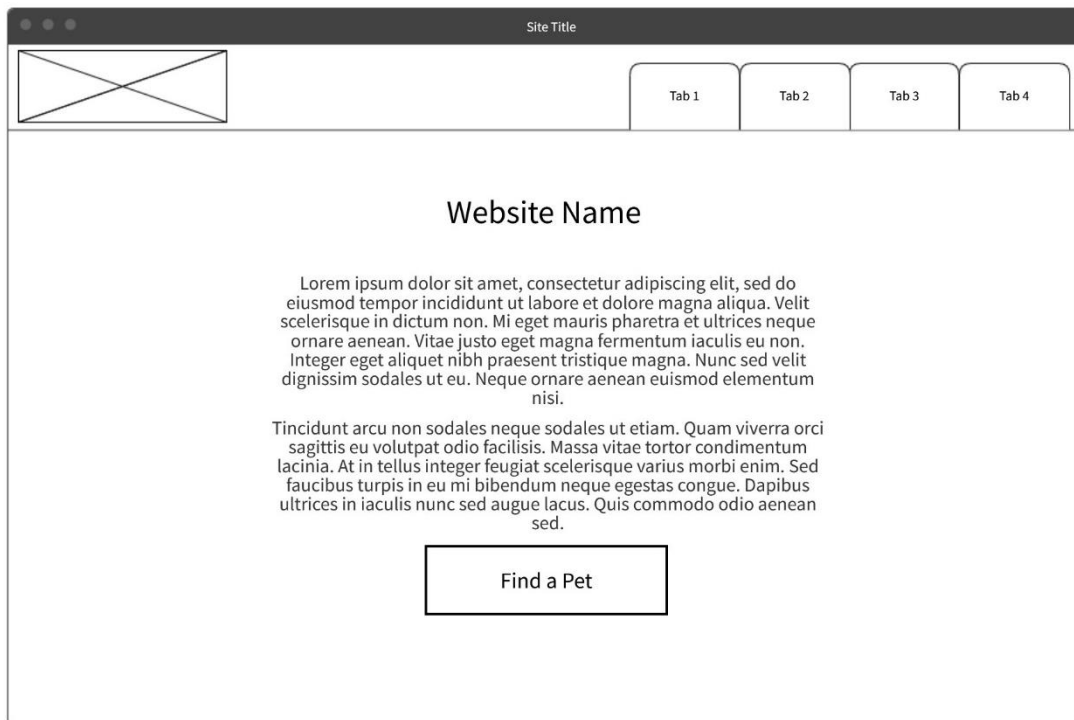

Admin features:

- Admin can add shelters to the database
- The shelter will be able to add animals and edit the traits of the animals
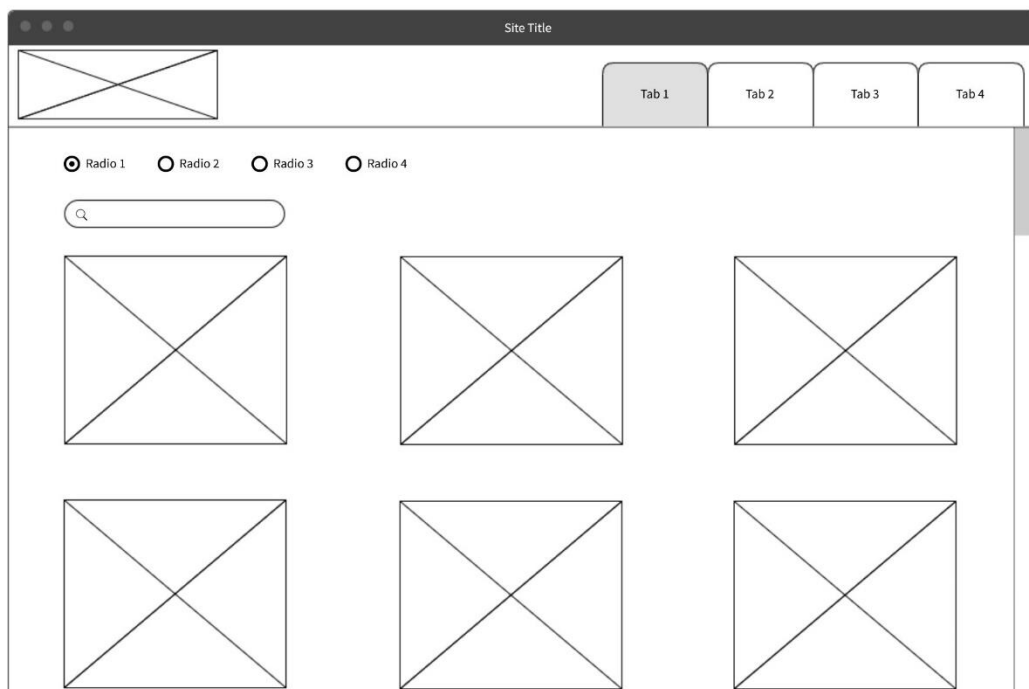

## Sitemap

Wireframe
